Localization & LSP technology

Software for language service providers and localization teams.

Language operations combine content, linguistic resources, client requirements and human judgment. We build software that brings these together, with the workflow controls language teams need to keep work clear and traceable.

What we build

Project and review workspaces

Role-based project and review experiences shaped around how your translators, reviewers and project managers collaborate.

AI-assisted quality checks

Linguistic resources, automated checks and human review connected, so every suggested finding can be inspected and acted on.

Integrations that keep work moving

Clear review states, deadlines, and connections to your existing translation and business systems.

How a first engagement runs

01

Free call

30 minutes on your workflow and tools.

02

Discovery sprint

1–2 weeks, fixed price, from $1,500.

03

First release

Typically 4–8 weeks.

04

Support

Plans from $500 a month.

How we work

- ◇ We check what your TMS and QA tools already do before building anything.
- ◇ Automation suggests; linguists and reviewers decide.
- ◇ Each client's resources, scoring rules and data stay separate.

From $25 / hour
agreed per project

From $1,500
fixed-price discovery sprint

From $5,000
focused first release
